Relative to lambda PaPa, Urlambda has expanded receptor specificity and adsorbs to E.coli cells more rapidly.
-: SIMILARITY: BELONGS TO THE TAIL FIBER FAMILY.
-: CAUTION: THIS IS A CONCEPTUAL TRANSLATION; A FRAMESHIFT WAS CORRECTED IN POSITION TO 396 TO RECREATE THE ORIGINAL STF PRIOEIN.

"Evidence that the immunity protein inactivates colicin 5 immediately prior to the formation of the transmembrane channel.";
J. Bacteriol. 177:6966-6972(1995).

-I- FUNCTION: THIS COLICIN IS A CHANNEL-FORMING COLICIN. THIS CLASS OF TRANSMEMBRANE TOXINS DEPOLARIZE THE CYTOPLASMIC MEMBRANE, LEADING TO DISSIPATION OF CELLULAR ENBRGY.

-I- FUNCTION: COLICINS ARE POLYPEPTIDE TOXINS PRODUCED BY AND ACTIVE AGAINST, ESCHERICHIA COLI AND CLOSELY RELATED BACTERIA.

-I- SIMILARITY: BELONGS TO THE CHANNEL FORMING COLICIN FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          dependent uptake via the Tsx receptor and to pore formation.";
Mol. Microbiol. 16:57-67(1995).
-1- FUNCTION: THIS COLICIN IS A CHANNEL-FORMING COLICIN. THIS CLASS OF
TRANSMEMBRARE TOXINS DEPOLARIZE THE CYTOPLASHIC MEMBRARE, LEADING
TO DISSIPATION OF CELLULAR ENERGY.
-1- FUNCTION: COLICINS ARE POLYPEPTIDE TOXINS PRODUCED BY AND ACTIVE
AGAINST, ESCHBERCHIA COLI AND CLOSELY RELATED BACTERIA.
-1- SIMILARITY: BELONGS TO THE CHANNEL FORMING COLICIN FAMILY.

Cell Biol. 127:303-318(1994).

-:- FUNCTION: MITOSIS-SEPCIFIC CHROMOSOME SCAFFOLD PROTEIN THAT COLOCCALIZES WITH TOPOISOMERAEI II. MAY FUNCTION IN CHROMOSOME COLOCCALIZES WITH TOPOISOMEASE II. MAY FUNCTION IN CHROMOSOME CONDENSATION OR SISTERS CHROMATID DISJUNCTION.

-:- SUBCELLULAR LOCATION: NUCLEAR. LOCATED ALONG THE ENTIRE LENGTH THE CHROMATID ARM AXIS.

-:- DOMAIN: CONSISTS OF TWO PUTATIVE CENTRAL COILED-COIL REGIONS FLANKED BY PUTATIVE GLOBULAR REGIONS AT THE N- AND C-TERMINUS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ದ

                                                                                                        -I-SUBCELLULAR LOCATION: Membrane-associated.
-I-ALTERNATIVE PRODUCTS: 7 isoforms: 1/4.1B-brain (shown here), 2/4.1B-heart, 3/4.1B-kidney, 4/4.1B-brain, 5/4.1B-heart, 6/4.1B-kidney and 7; may be produced by alternative splicing. Isoform 7 is 1nferred from the cDNA sequence of ref.2.
-ITSSUE SPECIFICITY: Highest expression in brain, lower in testis, adrenal gland, heart and kidney. Also present in muscle and epithelial cells Isoform 1 is expressed in heart and soform 2 is expressed in heart and isoform 6 seems to be most abundant in kidney while isoforms 4 and 5 are predominantly expressed in heart
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MISSING (IN ISOPORM 2, ISOFORM 3, ISOFORM 5, ISOFORM 6 AND ISOFORM 7).

-!- FUNCTION: MYOSIN IS A PROTEIN THAT BINDS TO F-ACTIN 6 HAS ATPASE
--- ACTIVITY THAT IS ACTIVATED BY F-ACTIN.
-!- SIMILARITY: BELONGS TO THE MYOSIN HEAVY CHAIN FAMILY. STRONGEST,
TO OTHER NON MUSCLE MYOSINS.

"Sequence analysis of Enterococcus faecalis aggregation substance
encoded by the sex pheromone plasmid padl.";
Mol. Microbiol. 4:895-904(1990).
-I- FUNCTION: AGGREGATION SUBSTANCE ALLOWS DONOR AND RECIPIENT STRAINS
TO FORM TIGHT AGGREGATES WHICH ALLOW THE NON-MOTILE BACTERRA TO
MAINTAIN PHYSICAL CONTACT OVER A PERIOD OF TIME SUFFICIENT TO
PERMIT CONJUGATIVE TRANSFER OF THE SEX PHEROMONE PLASMID FROM
DONOR TO RECIPIENT STRAINS.

                                                                                                                                                                                                   -I- DOMAIN: THE N-TERMINAL PART SEEMS TO BE A MYOSIN/CALMODULIN-BINDING DOMAIN, AND THE C-TERMINAL A TROPOMYOSIN/ACTIN/CALMODULIN-BINDING DOMAIN, THESE TWO DOMAINS ARE SEPARATED BY A CENTRAL BLICAL RECION IN THE MUSCLE FORMS.

-I- PTM: IN NON-MUSCLE CELLS, PHOSPHORYLATION BY CDC2 DURING MITOSIS CANDESS CALDESMON TO DISSOCIATE FROM MICROFILAMENTS.

PHOSPHORYLATION REDUCES CALDESMON BINDING TO ACTIN, MYOSIN, AND CALMODULIN AS WELL AS ITS INHIBITION OF ACTOMYOSIN ATPASE ACTIVITY. PHOSPHORYLATION ALSO OCCURS IN BOTH QUIESCENT AND DIVIDING SMOOTH MUSCLE CELLS WITH STMILAR EFFECTS ON THE INTERACTION WITH ACTIN AND CALMODULIN AND ON MICROFILAMENTS REORGANIZATION (BY SIMILARITY).

-!- SIMILARITY: TO A TROPOMYOSIN BINDING SITE DOMAIN OF TROPONIN T.
FILAMENTS). STIMULATES ACTIN BINDING OF TROPOMYOSIN WHICH INCREASES THE STABILIZATION OF ACTIN FILAMENT STRUCTURE. IN MUSCLE TISSUES, INHIBITS THE ACTOMYOSIN APPASE BY BINDING TO F-ACTIN. THIS INHIBITATON IS ATTENDATED BY CALCIUM-CALMODULIN AND IS POTENTIATED BY TROPOMYOSIN. INTERACTS WITH ACTIN, MYOSIN, TWO MOLECULES OF TROPOMYOSIN. INTERACTS WITH ACTIN, MYOSIN, TWO MOLECULES OF TROPOMYOSIN AN MITH CALMODULIN. ALSO PLAY AN ESSENTIAL ROLE DURING CELLULAR MITHOSIS AND RECEPTOR CAPPING. SUBCELLULAR LOCATION: ON THIN FILAMENTS IN SMOOTH MUSCLE AND ON STREAM PRODUCTS: 3 ISOFOMMS; GIZZARD H-CAD (SHOWN HERE), BRAIN L-CAD AND GIZZARD L-CAD; ARE PRODUCED BY ALTERNATIVE
                                                                                                                                           TISSUE SPECIFICITY: HIGH-MOLECULAR-WEIGHT CALDESMON (H-CALDESMON) IS PREDOMINANTLY EXPRESSED IN SMOOTH MUSCLES, WHEREAS LOW-MOLECULAR-WEIGHT CALDESMON (L-CALDESMON) IS WIDELY DISTRIBUTED IN NON-WUSCLE TISSUES AND CELLS. NOT EXPRESSED IN SKELETAL MUSCLE OR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   JOINED.

Submitted (NOV-1997) to the EMBL/GenBank/DDBJ databases.
-!-FUNCTION: IF-2, ONE OF THE ESSENTIAL COMPONENTS FOR THE INITIATION OF PROTEIN SYNTHESIS IN VITRO, PROTEIS FORMYLMETHIONYL-TRNA FROM SPONTANEOUS HYDROLYSIS AND PROMOTES ITS BINDING TO THE 30S RIBOSOMAL SUBUNITS. IT IS ALSO INVOLVED IN THE HYDROLYSIS OF GTP DURING THE FORMATION OF THE 70S RIBOSOMAL COMPLEX (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DQTDALQSEEA----AVVKAD-NAASDALEALAD------QTDAL-QSEEA 105

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A Accession: A26314
A Molecule type: DNA
A Molecule to the cell wall structure of group G streptococci and is cova
C Molecule to the cell wall structure of group G streptococci and is cova
C Molecule to the cell wall structure of group G streptococci and is cova
C Molecule to the cell wall structure of group G streptococci and is cova
C Molecule to the cell wall structure of group G streptococci and is cova
C Molecule to the cell wall structure of group G streptococci and is cova
C Molecule to the cell wall structure of group G streptococci and is cova
C Molecule to the cell wall structure of group G streptococci and is cova
C Molecule to the cell wall structure of group G streptococci and is cova
C Molecule to the cell wall structure of group G streptococci and is cova
C Molecule to the cell wall structure of group G streptococci and is cova
C Molecule to the cell wall structure of group G streptococci and is cova
C Molecule to the cell wall structure to the cell wall 
     R:Olsson, A.; Ellasson, M.; Guss, B.; Nilsson, B.; Hellman, U.; Lindberg, M.; Uhlen, M. Bur. J. Blochem. 168, 319-324, 1987
A.7Hile: Structure and evolution of the repetitive gene encoding streptococcal protein GA:Reference number: 800128; MUID:88023445
A.Accession: 800128; MUID:88023445
A.Accession: 800128
A.Molecule type: DNA
A.Residues: 1-593 < CLS>
A.Molecule type: DNA
A.Residues: 1-593 < CLS>
A.Note: par of this sequence, Emblay as Streptococcus G148
A.Note: part of this sequence, including the amino end of the mature protein, was confir R.Sjoebring, U.; Falkenberg, C.; Nielsen, E.; Akerstroem, B.; Bjoerck, L.
